

Mini 80mm CD-Rom / CD Audio / DVD-5

print type | **litho / Screen**

use with | **80mm CD-Rom / CD Audio / DVD-5**

print size | **78mm x 23mm**

Data size | **CD-Rom 180Mb / CD-Audio 20 mins / DVD 1.4Gb**

Printing Methods

Replicated 80mm CD-Rs and DVD-Rs can be printed with either of the following methods:-

- Litho print: CMYK plus one additional spot colour (screen printed).
- Screen print: spot colours or CMYK up to 6 colours.

Choosing a white base

- 23mm inner /78mm outer. This will cover the entire printable surface of the disc.
- 38mm inner /78mm outer. This will cover the metalised area of the disc.
- If printing without a white base, please take into consideration the difference in appearance of the ID ring and hub when designing artwork.

- We recommend always using a white base when printing to DVD-R media due to the reflective quality of DVD surface.

notes

- Artwork can be accepted in **.EPS**, **.JPG** (use maximum quality compression), **.TIF**, **.PDF** (print-ready), **.QXD** (QuarkXpress), **.INDD** (InDesign), **.PSD** (Photoshop), **.AI** (Illustrator) formats.
- All linked images must be embedded or included.
- All must fonts are included, embedded or outlined.
- Where possible, leave vector artwork and fonts unrasterized as this often produces a 'cleaner' print.
- All Pantone® colours should be clearly indicated.

- Pixel-based files should be supplied at a minimum of 300dpi and saved as CMYK image mode. Any files supplied in a lower resolution or different colour format (ie RGB) may not print correctly.
- Do not flatten or merge the template with your artwork as we will not be able to remove them.
- Finished artwork files under 5MB can be emailed to your Sales Manager or directly to our Artwork Team.
- If your files are over 5Mb in size, please email for instructions on how to upload the files to our FTP site.
